Masters Degree	Harvard Business School	2006

My thoughts

- this became a bit tricky when I had to move the zip file to the Server.
- The scp command was not working, my connection kept getting denied.
- Despite my attempts at troubleshooting by allowing new ips through the firewall and restarting various processes, it did not work
- my solution was to clone my repository
 - `git clone https://fdelacruz02/cis106`
- I then removed all the directories except finalProject
- I moved into the finalProject directory
- I then moved the zip file "myresume.zip to the /usr/www/mywebsite/ directory
- I unzipped my file, deleted the index, changed my html file to index
- I finally went to my home directory and deleted the cis106 repository
